

1. Provide documents identifying the commercial source or sources from which your agency purchases or has purchased fluoridation materials in the last five years, including the names of companies providing said materials, their addresses, their telephone numbers, their e-mail addresses, and the names of contact persons who represent said companies.

None

*AGENCY DOES NOT PURCHASE FLUORIDE NOR ADD FLUORIDE TO THE WATER.*

2. Provide documents identifying the specific content of fluoridation materials which your agency adds to our drinking water, indicating which specific minerals, compounds, and trace elements are contained in the fluoridation materials.

None

3. Provide documents identifying the cost of and annual budget for fluoridation materials and equipment purchased over the last five years and the initial cost of equipment to fluoridate the system.

None

4. Provide documents identifying, quantifying, and/or discussing any increase or decrease in the cost of repair and maintenance of equipment resulting from fluoridation over the past five years and in the future.

None

5. Provide documents identifying the means by which fluoridation materials have been delivered to the agency over the past five years, including bills of lading, bills of shipping, billing documents, and all correspondence, memos, and other documents relating to the transportation and delivery of fluoridation materials, including documents relating to spill prevention and cleanup.

None

6. Provide documents identifying the locations where the agency inserts fluoridation materials into water.

None

7. Give me and my associates a tour the facilities where fluoridation takes place so that we can take observe the fluoridation process and take photographs. The law says that "public records shall be available for inspection," and the fluoridation facilities themselves are "public records" in the broadest sense of the term.

N/A

8. Provide documents identifying the protocol for adding fluoridation materials to drinking water, including but not limited to mixing and dispensing fluoridation materials into drinking water and keeping the fluoridation materials uniformly mixed over time and distance. Provide documents discussing any instances where fluoride content has not been consistent throughout the water system.

None

9. Provide documents which show the presence of all elements and chemicals in fluoridation materials, that is assays made of drinking water immediately after fluoridation materials have been added to drinking water.

N/A

10. Provide documents which show the presence of all elements and compounds in raw fluoridation materials, that is assays made of raw fluoridation materials as they come out of the tanker, before they are added to drinking water and are diluted.

N/A

11. Provide documents which would indicate whether there are any trace amounts of aluminum, arsenic, antimony, asbestos, cadmium, lead, mercury, radium, radon, polonium, barium, beryllium, thallium, or uranium included in said fluoridation materials and the quantities and concentrations of them.

N/A

12. Provide documents listing the specific contaminants, elements, and compounds for which your agency or your sub-contractors currently test

and have tested for over the last five years, along with your protocols for testing.

Water Quality test data

*PROVIDE COPY OF WQ REPORT*

13. Provide documents indentifying the levels of various contaminants, elements, and compounds for which you test and have tested over the last five years (the levels below which elements or compounds, even if present are not reported as being present, and which are typically marked "u" on assays) along with the maximum level which you consider and have considered acceptable.

*100 samples per mo  
X 60 mos.  
Bact T.*

Water Quality test data *REPORT*

14. Provide documents prepared over the last five years showing the results of tests done by your agency for the contaminants, elements, and compounds referred to in the previous two paragraphs.

Water Quality test data *REPORTS*

15. Provide documents identifying: the materials added to control acidity or pH levels of drinking water, the quantity of such materials added, the pH level sought by adding such materials, the pH level obtained throughout the water system as a result of adding such materials, the means by which the pH level is monitored, where the pH level is monitored, and how frequently the pH level is monitored.

*ALLWD DOES NOT ADD ANY SUCH MATERIALS.*

16. Regarding materials added to lessen acidity of drinking water, produce documents identifying the specific materials added and discussing efforts taken or planned to keep these materials disbursed evenly throughout the drinking water system.

*N/A*

17. Provide documents identifying any mechanisms known to the agency by which materials added to lessen acidity of drinking water can be or are precipitated out or rendered less effective at reducing the acidity of the fluoridated water.

*N/A*

18. Fluoride dissolves lead. The use of lead and lead solder in plumbing was not outlawed until 1986. In light of this fact, provide documents identifying or discussing lead levels in the water system, including lead levels in the water in buildings built before 1986, including school buildings built before 1986.

*\* (PROVIDE LEAD & COPPER TEST RESULTS)*

~~Water Quality test data~~

19. Provide documents identify homes and buildings in the area served by the Water District known to have lead plumbing or plumbing containing lead solder.

No records or authority regarding private property

20. Provide documents comparing lead levels in raw untreated water, lead levels in fluoridation materials, and lead levels the water in buildings built before 1986.

*N/A*

17. Provide documents giving any explanation you may have for why lead levels in water in the pipes in buildings built before 1986 is or would be higher than in raw water and fluoridation materials. See:  
<http://seattlepi.nwsourc.com/local/291566lead08ww.html>.

*NONE*

18. There are scientific and scholarly reports which conclude that fluoride is harmful to fish or repels fish. Provide documents which address this issue.

*NONE*

19. Provide the written order or prescription in your possession or available to your agency from a medical or other professional which authorizes the Water District to add fluoridation materials to Water District water, and/or which specifies the amount to be added, and/or which specifies the specific fluoridation chemical to be added.

*N/A*

20. Provide the written order or prescription in your possession or available to your agency from a medical or other professional which grants written assurance to the Water District that the addition of fluoridation materials to the water is safe for the general population and for special populations such as babies and those with thyroid and kidney disease.

*N/A*

21. Provide documents identifying agencies, laboratories, or other organizations from which you obtain on an ongoing basis or have obtained in the past or which you now can obtain information pertaining to the requests and questions posed in this document.

None

26. Provide a copy of NSF/ANSI Standards 60 and 61.

27. Provide copies of insurance invoices showing how much the Water District paid for insurance for the last two years and provide copies of policies covering the Water District, showing policy limits, endorsements, and exclusions.

*(SEE ATTORNEY)*

2007 & 2008 Policies

28. Provide any documents relating to how the decision was made to fluoridate our water, including who campaigned in favor of and against fluoridation.

*N/A*

~~Board Minutes??~~

29. Provide any written communications between Alderwood Water District regarding water fluoridation going back to when the decision was made to fluoridate our water.

*N/A*
